

Anaconda is the most popular Python data science platform. See <https://www.anaconda.com/downloads/>.

By default, this installer modifies all available shells to activate the base environment of Anaconda3 when the shell starts up. To disable this, choose "Customize" at the "Installation Type" phase, and disable the "Modify PATH" option. If you decline this option, the executables installed by this installer will not be available on PATH. You will need to use the full executable path to run commands, or otherwise initialize the base environment of Anaconda3 on your own.

To install to a different location, select "Change Install Location..." at the "Installation Type" phase, then choose "Install on a specific disk...", choose the disk you wish to install on, and click "Choose Folder...". The "Install for me only" option will install Anaconda3 to the default location, ~/anaconda3.
